

STEEL GRIPS
JOURNAL OF STEEL AND RELATED MATERIALS

Table of Contents 7 (2009)

No. 1 - Automation

Michel Dussud, Kuo-Sung Huang, Franck Montegu, and Dominique Alain:
Concept and practical results of new eddy-current mould level sensors 8

Stéphane Graff and Franz-Josef Lenze:
Simulating the hot stamping process of high-strength 22MnB5: From hot stamping to crash-simulations 28
Hot stamped components; material characterisation, simulation of hot forming process and crash behaviour; experimental results

M. Dolores Riera, Miguel G. Coussirat, Alfredo J. Guardo, Isaac Valls, and Daniel Casellas:
Simulation of hot stamping processes 49
Hot sheet stamping, thermomechanical forming, modeling, simulation

Hossein Karbasian, Christian Klimmek, Alexander Brosius, and A. Erman Tekkaya:
Numerical process design of hot stamping processes based on optimized thermo-mechanical characteristics 57
Hot stamping, high strength steel, thermo-mechanical coupled simulation, design of experiments, 22MnB5

Rajeev Baskiyar, Binod Krishna, and Damodar Rai:
Simulation studies on the quenching process in QST steel rounds 62
Simulation, quenching, rounds, heat transfer coefficient, QST

No. 2 - Plants & Equipment

Leire Vadillo, Angela Mangas, Jose Ignacio Zarazua, Beatriz González, Maria Angeles Gutiérrez, Uwe Paar, and Vitoon Uthaisangsuk:
Hybrid method for low pressure forming of boron alloyed steels 100
Tube, gas, blowing, boron, steel, draw-in, plasticity, temperature

D. Satish Kumar, Sundaresan S., Vasa S. N. Murthy, Prabhat K. Ghorui, and Madhu Ranjan:
Pretreatment of hot metal 107
Hot metal pretreatment, desiliconisation, dephosphorisation

Carlos Hoffmann Sampaio, Hermann Wotruba, Washington Aliaga Pizarro, Edison Thaddeu Pacheco, Edison Antonio Petter Filho, and César Ferrazzi Duarte:
Introduction of the first dry coal processing method in Brazil with Candiota coal 114
Brazilian coal, beneficiation, air jig, characterization, Candiota coal

Mikael Thunman, Jimmy Gran, and Du Sichen:

- Slag-refractory reaction during ladle refining and teeming** **129**
 Inclusions, refractory, ladle glaze, morphology, cold model

Elsayed M. Elsayed and Ahmed E. Saba:

- Preparation of standard copper ferrite thin film from aqueous solution** **137**
 Copper iron alloy, copper ferrite, anodic oxidation, nanocrystalline deposition, electrochemically produced thin films, current efficiency, current density

Kerstin Garbracht:

- Heavenly iron - meteorite art by Ulrike Arnold** **158**

No. 3 - Products & Quality

Franz-Josef Lenze, Sascha Sikora, Janko Banik, and Dirk Sauer:

- Development tendencies for the press hardening of coated steel** **180**
 Development tendencies for the press hardening of coated steel

Ali Abdel Fattah El Warraky, Abeer Esmat El Meleigy, and Mohamed Farouk Shehata:

- Effect of bismuth(III)chloride on the dealloying of Cu binary alloys in acid solution: dealuminification and denickelification** **210**
 Corrosion, inhibition, BiCl₃, dealloying, dealuminification, denickelification

Wolfgang Tillmann, Evelina Vogli, Ingor Baumann, and Fabian Hoffmann:

- Functional wear resistant tool surfaces for hot metal forming processes** **217**
 Hot sheet metal forming, wear, functional PVD coating, multilayer

No. 4 - Surface technology

Kerstin Garbracht in interview with:

- The team going for quality at Corus Strip Products, Ijmuiden** **244**
 Quality, product improvement, process development, implementation of quality control systems, quality execution system, handling of quality-relevant data, logic designer, rule designing tool, data exploitation, interdepartmental cooperation across research and quality engineers of the pickling lines

Mohandas Villunni Parambil and Sankara Raman Sankaranarayanan:

- COQ, a strategic tool in decision-making** **252**
 Capture and eliminate the total value of poor quality, systematic approach to tracking COQ (cost of quality) to identify potential areas to be improved, continuous casting process, breakouts, cost of quality (COQ), cost of poor quality (COPQ), opportunity costs

Daniel Berglund, Krister Amundsson, and Lars-Olof Hellgren:

- Hot stamped components with soft zones-simulation and validation of material properties and product performance** **261**
 Hot stamping, soft zones, simulation, validation, microstructure, mapping, crashworthiness

Mikael Thunman:

- Creation of a classification algorithm for inclusion identification and its applicability to vacuum degassed steel** **290**
 Inclusion, classification, automatic inclusion detection software, ladle treatment

No. 5 - Process technology

Carlyle Singh, Xavier Rabec, and Michel Dussud:

- Mould level system upgrade at ArcelorMittal Dofasco's No. 1 caster** **332**
Continuous casting, mould level, eddy-current sensor, actuator, stopper-rod mechanism

Ian Christmas:

- worldsteel-43 Beijing 2009: short range outlook for steel demand** **340**
43rd annual meeting of the World Steel Association; updated forecast for world steel demand for 2009 and 2010 based on the work of the Committee on Economic Studies which met in Brussels in the middle of September

Andrei Chychko and Alexander Chychko:

- Some aspects of blowholes formation in low-silicon steels** **354**
Low-silicon steel, blowhole formation, steel deoxidation, aluminium yield, oxygen activity

No. 6 - Application

Till Laumann and Markus Pfestorf:

- Crash behaviour of various modern steels exposed to high deformation rates** **409**
Hot forming, crash appropriateness, annealing, tailored blanks, evaluation of characteristic values

Gerri H. Tappe:

- New developments in welding technology, profound base to enhance chances** **415**
GMA welding, submerged arc welding, cutting, welding power sources, torches, automation, robots, gases, electron beam, laser-beam welding and cutting devices, protection equipment, welding work-place equipment, non-destructive and destructive testing, knowledge exchange

Franz-Josef Lenze, Sascha Sikora, Janko Banik, Oliver Straube:

- Hot forming - new potentials for innovative manufacturing** **428**
Hot forming, process parameter, part analysis, partial austenitizing, thermal imaging

Parankusham Venkata Ramana, Gankidi Madhusudhan Reddy and Ayyapu V. S. S. K. S. Gupta:

- Influence of parent metal mechanical properties on those of the different ultra-high-strength steel electron beam welds** **441**
Maraging steel, medium-alloy medium-C steel, electron beam welding, hardness, tensile strength, impact toughness

Gadadhar Sahoo, Kilaru Ravi, Srikanthi Srikant, and Pandurangan Saravanan:

- Sensitization study and microstructural transformation of 12-% Cr ferritic stainless steel weldments** **449**
Ferritic steels, microstructures, HAZ, phase transformations, grain refinement

Amer E. Amer, Sabine Weiß, and Alfons Fischer:

- Improvement of fatigue resistance of low-nickel stainless steels for biomedical applications compared to CoCr-alloys** **457**
Fatigue data of steels for biomedical applications, high nitrogen stainless steels, nickel-free stainless steel, CoCr alloy, investigation of microstructural behaviour under pure fatigue tension

Sanjeev Kumar, Samir Kumar Jha, Damodar Rai, Roylen Topno, Daya Shanker Gupta, and Ramesh Chandra Thakur:

- Variation in surface residual stress of C-Mn rail with usage** **472**
Residual stresses, fatigue failure, gauge corner, tensile residual stresses, rail usage, service life
